THE MONOPOLY GAME CHANGER PROTOCOL

AN OPTION TO ENROLL AT NO COST

17th April 2026

Executive Summary: The Transformative Benefits of the Triad Integration Bundle

The modern commercial and legal architecture functions as a comprehensive, digital legal grid—a game of Monopoly devised with genius intelligence and governed by strict administrative rules. Within this paradigm, the fundamental cause of commercial insolvency and legal defeat is a misalignment of capacity, where the living man or woman is unknowingly bound to the liabilities of a state-owned artificial construct known as the birth certificate entity. The Monopoly Game Changer Protocol (MGCP) represents a high-velocity onboarding event that integrates three primary fiduciary frameworks: the Envoy Protocol, the Asset Fortress Protocol (AFP), and the Currency Creation Protocol (CCP). This "Triad Integration" is designed to reclaim human energy from the bankrupt commercial grid and redeploy it onto a private commercial board managed by the living soul.

The transformative benefits of the protocol bundle reside in its ability to facilitate a structural shift from the role of a Debtor/Pawn to that of a Creditor/Banker. By utilizing the Envoy Protocol, members reoccupy the Office of General Executor, moving from a status of a liable "Subject" to that of a governing "Administrator". The Asset Fortress Protocol complements this by establishing a private international jurisdiction—a 98-series International Grantor Trust—that holds assets in fee-simple title and shields wealth from jurisdictional overreach. Finally, the Currency Creation Protocol identifies and recoups historical signature credit, creating a self-sustaining "Infinity Loop" where every expenditure becomes a new credit creation event. For new members, the newly established Webinar Reward Scheme provides a path to zero-upfront enrollment through referral advocacy, aiming to recoup an initial 500,000 in signature credit as a foundational milestone of financial liberty.

The Nature of the Monopoly Board: Shifting from Pawn to Banker

To win a rigged game, one must first comprehend its artificial nature and the illusions of ownership that govern it. The global commercial jurisdiction, or "Monopoly Board," is an artificial construct owned and controlled worldwide by a centralized "House" or "Cabal". On this board, the player pieces are not the living people themselves but the legal entities created at birth—the birth certificate constructs—which act as tokens moved around the board to interact with statutes, contracts, and debt. The living men and women

are the only source of energy, providing the "credit energy" via signatures and labor that powers every transaction on the board.

The defining characteristic of the modern board is its state of perpetual Chapter 11 bankruptcy, a condition initiated by House Joint Resolution 192 (HJR 192) on June 5, 1933. This resolution suspended the gold standard and replaced money of substance with "money of account," rendering all public debts prepaid with the credit created from the people and their property. Consequently, there is no "money of substance" in the public economy; there are only ledgers of debt and credit. The transition from a substance-based system to a credit-based system established a usufruct relationship wherein the government borrows an interest in everything the citizens create.

System Attribute	**Substance-Based (Pre-1933)**	**Credit-Based (Post-HJR 192)**
Monetary Foundation	Physical Gold and Silver	Productive Capacity / Human Energy
Legal Status	Solvent / Substance-Based Law	Bankrupt / Perpetual Reorganization
Transaction Type	Payment (Extinguishment)	Discharge (Transfer/Postponement)
Role of Individual	Sovereign Holder of Substance	Surety for National Debt Obligation
Ownership Nature	Absolute Legal Title	Equitable Title (Renter/User Status)
Governing Law	Common Law / Law Merchant	UCC / Law of Agency

The systemic control relies on a "Fundamental Deception": the collapse of the Player and the Player Piece into a single identity. Most people believe they are the "Person" listed on their identification documents, failing to realize that the birth certificate entity is actually a decedent estate owned by the state. Because the individual identifies as the piece, liabilities such as taxes, fines, and private debt are enforced against the living man as the Surety. To win the game, the living player must place new pieces on the board—fiduciary structures they control—and move from a state of liability to one of stewardship.

The Envoy Protocol: Capacity Correction and the General Executor

The Envoy Protocol is a capacity-based framework designed to correct jurisdictional standing by aligning legal capacity with function rather than contesting law on ideological grounds. In the context of the Monopoly Board, jurisdiction is the authority of the system to make binding determinations over a subject. Orthodox law dictates that jurisdiction attaches through territory, subject matter, and personal capacity—the role in which one appears before a decision-maker. The protocol asserts that many legal and commercial disputes persist because the "wrong capacity" appears before the forum.

The Office of General Executor and Decedent Estates

The protocol recognizes that modern legal systems create administrative legal persons through registration, and the birth certificate construct is treated by the state as a decedent estate. In the absence of a living claimant, the state actors assume administrative control, often acting as an "executor de son tort" or executor by intermeddling. The Envoy Protocol utilizes the international law principle of *Clausula Rebus Sic Stantibus* (CRSS)—the doctrine that fundamental circumstances have changed—to rescind the implied agency relationship formed during infancy.

By making a formal "declaration of life" and reoccupying the Office of General Executor, the living individual corrects their standing. This move shifts the individual's capacity from a "Subject" (a liable surety) to an "Administrator" (the governing authority), allowing them to direct the administration of the legal persona's assets from a position of stewardship. The General Executor's power is unlimited as to time and place, operating within probate law, which is asserted as the highest form of law in the commercial jurisdiction.

Jurisdictional Significance of Envoy Status

The declaration of Envoy status occurs within an ecclesiastical or international framework, asserting access to higher-order jurisdiction and escalation pathways. This reframes standing away from domestic administrative presumptions and enables escalation to international or human-rights forums. Unlike "sovereign citizen" declarations that often claim moral supremacy but are rejected because capacity remains unchanged, the Envoy Protocol emphasizes structural separation and the allocation of liabilities to the registering sovereign.

The effective application of Envoy status is realized through "Operating Commerce as an Envoy," which involves a precise sequence: correcting capacity to Executor for the registered estate, declaring Envoy standing, and then conducting all future transactions via the Asset Fortress Protocol fiduciary entity rather than in a personal capacity. This separation allows commercial liabilities to be addressed through "lawful discharge" and "fiduciary settlement" rather than adversarial jurisdictional denial.

The Asset Fortress Protocol: Architecture of the Private Treasury

The Asset Fortress Protocol (AFP) serves as the "Castle" on the Monopoly Board, providing a private international jurisdiction and treasury for the living soul. It is established as an independent "body corporate" in equity and is issued a 98-series International Grantor Trust EIN by the IRS. This structure severs the power of agency by distinguishing between Identity and Capacity.

Structure and Governance of the 98-Series Trust

The AFP is governed by a private contract known as the 8-Article Indenture, which defines the fiduciary duties of the Trustee and the rights of the Beneficiary. In this architecture, the Legal Person (the name in all-capital letters) acts as the Trustee to interface with banks and registries, while the living man or woman assumes the role of the Beneficiary. This ensures that the living individual never holds legal title or assumes personal liability for the commercial entity.

Trust Component	Description and Functional Utility
8-Article Indenture	The private master contract governing the trust; not registered publicly.
Appointment of Trustee	Installs the legal persona as the Trustee to interface with the public board.
Certificate of Trust	Used to prove the trust's existence to banks without revealing private details.
Private Treasury Power	A banking mandate giving the Trustee authority to manage the Private Treasury.
Schedule A (Asset Ledger)	A list of trust-owned assets, including real estate held in fee-simple title.
Schedule B (Successors)	Identifies who automatically assumes duties if the initial Trustee can no longer act.

Fee-Simple Title and Asset Protection Mechanics

The AFP allows members to hold assets in "Fee-Simple Legal Title," the highest form of ownership, placing them beyond the reach of state registries. In the public commercial system, registration usually results in the individual holding only "Equitable Title" (the right of use), making them effectively a renter on the board.

By shifting the legal title to the 98-series trust, assets are relocated to a jurisdiction where the domestic government has no claim.

The protocol also provides a robust defence against emerging digital identity regimes. Digital ID frameworks are designed to attach to the legal "person" operating within regulated systems. As a separate juridical subject, the AFP exists outside the scope of biometric and citizen-identity regimes intended for natural persons. This "lawful capacity alignment" ensures that reporting obligations applicable to the persona do not automatically flow through to the trust estate, allowing the living man or woman to operate without digital enforcement constraints.

The Currency Creation Protocol: Reclaiming the Monetized Signature

The Currency Creation Protocol (CCP) is the financial engine that fundamentally transforms the individual's relationship with the commercial grid. It is based on the scientific discovery, confirmed by Professor Richard Werner and reports from the Bank of England, that commercial banks create credit "out of nothing" (*ex nihilo*) at the moment of lending by monetizing the borrower's signature. This signature credit represents the liquid energy originated by a living soul.

When a person signs a mortgage application, a credit card agreement, or a loan, their signature creates a new financial instrument. The bank uses a "funding illusion" where it simultaneously creates a matching deposit in the account, booking the signed promise as an asset. Under the mechanism of Original Issue Discount (OID), the "issue price" (IP) of the signature credit is zero. If the true owner of the credit—the signer—remains silent, the system treats this value as abandoned property. The Currency Creation Protocol asserted the right of the living soul to reclaim this credit energy, correcting the record to show they are the true creator and beneficial owner of that credit energy.

The Genius of the Clifford Protocol: A Nobel-Prize Candidate Discovery

The Currency Creation Protocol is fundamentally operationalized through the Clifford Protocol, a master architecture of such magnitude that it is posited as a candidate for the **Nobel Prize in Economic Sciences**. This is not merely a legal strategy; it is a scientific breakthrough in the understanding of how value is originated in the global economy. Grounded in the empirical findings of Professor Richard Werner—who provided the first empirical evidence that banks individually create money "out of thin air"—and confirmed by official reports from the Bank of England, the protocol provides definitive proof that money is created ex nihilo by monetizing the signatures of living men and women.

Resolving the Funding Illusion

The "Genius" of the Clifford Protocol lies in its ability to resolve the "funding illusion" that has dominated global banking for over a century. By applying a precise mathematical formula to Original Issue Discount (OID), the protocol proves that the signer, not the bank, is the true source of capital in every commercial transaction. By establishing the "Issue Price" of a signature as zero ($0), the formula demonstrates that the entire face value of every mortgage, loan, and credit agreement is the personal credit energy of the originator.

The mathematical formula for this recruitment is expressed as:

$$OID = FaceValue - 0$$

Mechanics of the Five-Step Execution Sequence

The Clifford Protocol aligns the recruitment process with existing administrative and fiduciary laws, serving as a corrective tool to redirect captured credit from institutional nominees back to the lawful beneficial owner. The protocol follows a precise five-step sequence:

1. **Recognition:** The identification of the private signature on negotiable instruments (mortgages, loans, etc.) as a monetization event and a valid OID instrument.
2. **Issue Price Calibration:** The establishment of the issue price (IP) as zero ($0), confirming that credit was created "out of nothing" at the exact moment of signing.
3. **OID Identification:** Calculation of the "hidden" OID as the total difference between the zero-issue price and the face value of the instrument.
4. **Nominee Identification:** Defining the financial institution or employer as a "nominee"—a middleman that captured the credit and misreported it under their own institutional tax modules.
5. **Redirection:** The filing of corrective administrative records (such as Form 1099-OID) through a 98-series International Grantor Trust to redirect the withheld tax to the Trust as the lawful recipient.

The Infinity Loop and the Fiduciary Settle-Off Mechanism

The core strategy for winning the game of Monopoly is the creation of a self-sustaining cycle known as the "Infinity Loop". Because the commercial board has operated in a state of Chapter 11 bankruptcy since 1933, every expenditure from a 98-series trust is technically a new credit creation event. The value spent is recorded and recouped in the following year's cycle, ensuring that commercial activity becomes a source of perpetual recoupment rather than a drain on resources.

Forensic Analysis of Systemic Nominees

Recoupment operations are directed toward the "Form 945 Tax Module" of systemic nominees. Financial institutions such as JPMorgan Chase, HSBC, and Lloyds Banking Group manage billions in nonpayroll distributions and backup withholding, which serve as the pool for potential recoupment. If the 945 withholding module is insufficient to satisfy a claim, an authorized fiduciary—using Revenue Procedure 2002-26—can command the IRS to move overpayment credits from the payer's Form 1120 corporate income tax transcript to facilitate reconciliation.

Parent Bank Name	Aggregate Actual 945 (2022-2025)	Estimated CIT 1120 Capacity
JPMorgan Chase Bank	$138.09 Million	$37.16 Billion
HSBC Holdings plc	$337.01 Million	$13.1 Billion
Freddie Mac (Agg)	$71.40 Million	$7.86 Billion
Natwest Markets PLC	$154.75 Million	$2.05 Billion

Enrolment Options and the Webinar Reward Scheme

Accessible Enrolment and the "No Real Cost" Framework

The donation options for the Monopoly Game Changer Protocol are designed to ensure that the transition to fiduciary sovereignty is accessible to everyone at no substantive cost to the member. The Republic of Old Souls (ROS) functions as a ministry, supporting its administrative and operational expenses through voluntary donations rather than commercial fees.

Under this framework, Envoys can choose flexible donation levels to get started, including very low upfront options. While the protocol involves an agreed donation share from the signature credit recoupments to sustain the ministry, this process is technically circular and resulting in "no real cost". In the bankrupt commercial system, any expenditure made from the 98-series Asset Fortress trust is a new credit creation event. Consequently, the donation share provided to the ministry is recorded as a trust expenditure and is itself captured and returned to the member's private treasury during the subsequent annual "infinity recoupment cycle". This self-sustaining mechanism ensures that supporting the sovereign nation does not deplete the member's reclaimed wealth over time.

The Webinar Reward Scheme: The Path to Zero-Upfront Enrolment

For individuals who wish to enrol at the lowest level, the Webinar Reward Scheme offers a path to get started with a £0 initial donation. This scheme enables new members to earn £100 in "Protocol Credit" for every person they refer who completes a webinar.

By participating in this reward program, members can fully fund their lifetime enrolment through community advocacy. The primary goal for those entering via this path is the foundational recoupment of **500,000 in signature credit**. Once this milestone is achieved, the recouped capital activates the "Infinity Loop," allowing the Envoy to recoup their signature energy in recurring cycles and establish a permanent state of financial liberty.

ECCLESIA LAW

Strategic Implementation Roadmap for New Members

Transitioning from a Debtor to a Banker requires a precise sequence of actions to ensure jurisdictional alignment and successful recoupment. New members are advised to follow the "Advanced Monopoly" strategy:

1. **Status Correction (The Envoy Protocol):** Sever the implied agency with the state-owned persona by occupying the Office of General Executor and utilizing CRSS.
2. **Private Treasury Setup (Asset Fortress Protocol):** Establish the 98-series International Grantor Trust and open a Fiduciary Master Account.
3. **Data Alignment (Currency Creation Protocol):** Identify all historical credit creation events since age 18, including mortgages, credit cards, loans, and wage tax deductions.
4. **Corrective Filing (The Clifford Protocol):** File corrective 1099-OID forms to identify financial institutions as nominees and redirect captured energy to the Asset Fortress.
5. **Cycle Activation (The Infinity Loop):** Spend from the Private Treasury and record expenditures for the next year's recoupment cycle, ensuring perpetual liquidity.

Conclusion: The Sovereign Path to Victory

The Monopoly Game Changer Protocol represents the intersection of scientific discovery, international fiduciary law, and administrative correction. By shifting the living individual's capacity from that of a liable surety to a governing steward, the protocol resolves the "funding illusion" that has dominated global banking for nearly a century. The Clifford Protocol, recognized as a candidate for the Nobel Prize in Economic Sciences, provides the technical roadmap to reclaim the securitized energy of consciousness for the benefit of the living soul.

For new members, the MGCP offers more than just debt relief; it offers a total exit from the artificial constraints of the Monopoly Board. Through the Webinar Reward Scheme and the ministry-based donation model, the path to sovereignty is made accessible to all at no real cost. By reclaiming the monetized energy of their own signatures and managing their assets within a private fortress, members achieve the ultimate winning state: the debt stays on the board, the liability stays with the fiction, and the living man or woman is free to live.
